

At Sweet Seeds® we are one of the pioneer seedbanks that have contributed to the fact that nowadays feminized seeds became the favourite of cannabis growers around the world. High quality and high yielding genetics, very resinous and especially aromatic, with a feminization rate of around 99,9% and a germination rate above 95%. This is our quality compromise with our clients.

Recently the cannabic scene has seen an explosion of varieties rich in CBD (Cannabidiol), a non-psychoactive cannabinoid with multiple therapeutic applications, leading these varieties to the "medicinal" designation. In this 2017 season we present our first cannabis strains rich in CBD, one of them is photoperiod dependent, **S.A.D. Sweet Afgani Delicious CBD® (SWS60)**, and the other is an autoflowering strain, **Sweet Nurse Auto CBD® (SWS59)**. In the last few years we have been researching with genetics coming from the USA. This season we launch two new photoperiod-dependent strains with magnificent earthy and lemony aromas from the Kush family, developed from American genetics, named **San Fernando Lemon Kush® (SWS62)** and **Indigo Berry Kush® (SWS63)**.

At Sweet Seeds® we have been pioneers in the R&D of modern autoflowering varieties. These varieties gave birth to a genetic revolution that transformed the world of cannabis seeds. In the last few years we presented new families within this type of varieties, such as our purple-flowered autoflowering strains from "**The Red Family**", or our tall-stemmed autoflowering strains from the "**Big Devil Family**" and also our "XL" genetics.

This season we present a new autoflowering strain: **Crystal Candy Auto® (SWS61)**. An autoflowering version of our Crystal Candy® (SWS58), a strain with an exquisite aroma and stunning resin production.

Recently we also presented our "**F1 Fast Version**®" family of strains. These strains are photoperiod-dependent versions of classics from our catalog, but with a very fast flowering time. With collective bulk purchasing and members of cannabis clubs in mind, in the 2015 season we presented new packaging formats of 25 and 100 seeds for some of the most famous Sweet Seeds® varieties.

We want to thank you for these 12 years with the special gift of 1 and 2 seeds in every pack of 3 and 5 seeds respectively. You can check the length of this special offer at WWW.SWEETSEEDS.COM.

#### Thanks!

Kind regards from the Sweet Seeds® team.

**Photoperiod-dependent:** Varieties that flower depending on the number of hours of light that they receive. Autoflowering (aka Automatic): Varieties that start flowering when they reach to a specific lifetime, regardless of the hours of light that they receive.

**F1 hybrid:** The first resulting generation of the hybridization between two different and stable varieties. **S1:** First resulting generation from the self-pollination of an individual.

**F1 Fast Version®:** Photoperiod-dependent varieties with fast flowering. F1 hybrids between photoperiod-dependent and autoflowering varieties.

**3G, 4G, 5G...** (in Autoflowering): Identifies the generational steps and not the generations themselves. We established a new generational step every time the presence of Cannabis Ruderalis genetic in the autoflowering varieties is reduced. It is usually due to the cross with photoperiod-dependent genetics.

#### Sweet Nurse Auto CBD®

5th generation autoflowering strain. This variety featuring high levels of Cannabidiol (CBD) is the result from the cross between a selection of our best 4th Generation autoflowering strains and a photoperioddependent clone rich in CBD. Sweet Nurse Auto CBD® (SWS59) is our first autoflowering genetic rich in CBD. The THC:CBD ratio of this variety stands between 1:1 and 1:2. This is a genetic with a "different" psychoactivity, soft and gentle, adequate for cannabis users who prefer to avoid the psychoactive effects of other type of strains rich in THC. This kind of CBD-rich genetics are appropriate for the treatment of multiple illnesses because of their therapeutic and medicinal properties of both CBD and THC. Among other medicinal uses, CBD has been used to reduce anxiety, convulsions, nausea and vomits, inflammation, pain, and a long etcetera of pathological conditions. This strain is a great producer of resin and flowers, delivering a big central bud and multiple smaller buds on the side branches. It features an intense and penetrating sweet fruity aroma, with tones of

# S.A.D. Sweet Afgani Delicious CBD®

IEW · NEW · NEW · NEW

"Medicinal" version of our S.A.D. Sweet Afgani Delicious S1® (SWS02), now featuring high levels of Cannabidiol (CBD). This strain is the result of the cross between our appreciated and widespread elite clone of Black Domina '98 and a clone from the Diesel family very rich in CBD.

The THC:CBD ratio of the resulting genetic from this cross stands between 1:1 and 1:3. The plants show a "different" psychoactivity, soft and gentle, adequate for cannabis users who prefer to avoid the psychoactive effects of other type of strains rich in THC. This kind of CBD-rich genetics are appropriate for the treatment of multiple illnesses given the therapeutic and medicinal properties of both CBD and THC. Among other medicinal uses, CBD has been used to reduce anxiety, convulsions, nausea and vomits, inflammation, pain, and a long etcetera of pathological conditions. This variety has a typical Indica structure, with a big central bud, multiple side branches and large production of flowers and trichomes. . The aroma of this genetic is very pleasant, sweet and musky, with fresh tones of cypress and a soft background of hot spices and wood.

Variety SWS60 Indica/Sativa: 60%/40% **Ratio THC:CBD:** (1:1-1:3) **Indoor Blooming:** 8-9 weeks **Outdoor Harvest:** 

late September

#### Sweet Cheese Auto®

3rd generation autoflowering strain. This hybrid is the result of crossing a selected genetic line of Fast Bud Auto® (SWS16) and a Sweet Cheese® (SWS19) elite clone from the Sweet Seeds®´ R&D Department. The resulting hybrid was backcrossed twice with the Sweet Cheese® clone in order to establish the Cheese aroma.

This variety produces a long and thick central bud which is very compact and resinous. It has retained the intense and very sweet aroma characteristic of Sweet Cheese®, with matured spicy cheese tones and soft hints of lemon.

Variety SWS33 Indoor/Outdoor Harvest: 8 weeks from germination Height: 60-110 cm

24,50€

350€

#### Cream Mandarine Auto®

3rd generation autoflowering strain. This is the result of the development of an extremely special strain from Cream Caramel Auto® (SWS22) (2G) with very high production and pronounced sweet citrus aromas of the mandarin orange type.

This curious and exquisite Cream Caramel Auto® strain has been hybridized with an elite clone of our Ice Cool® (SWS06) to strengthen the mandarin orange citrus aromas. In the end of flowering many plants acquire purple and reddish tones.

Variety SWS29

# Crystal Candy Auto®

4th generation autoflowering strain. This is the result of the cross between our Crystal Candy® (SWS58) and an autoflowering variety with very similar aromatic tones, the Sweet Special Auto (SWS35).

This strain was developed within a special programme of the Sweet Seeds®' R&D Department focused on the search for curious, exquisite and subtle sweet aromas that evoke aromatic sensations of candy shop. The aroma of this variety is sweet and fruity, with tones of chewing gum and fruit jellies, mixed with hints of acid strawberry and mature melon.

This strain is a great producer of aromatic resin crystals and also a large producer of beautiful buds. It features a big size for an autoflowering variety, producing plants that easily exceed one meter of height.

Variety SWS61 Indoor/Outdoor Harvest: 8 weeks from germination Height: 70-130 cm

3s+1s 23,90 € 5s+2s 39,80 €

#### Killer Kush Auto

4th generation autoflowering strain. Autoflowering version of one of the most famous strains from the West Coast of USA. Developed around the year of 1994 in Sunset Beach, South California, and named as Ocean Grow Kush but better known as OG Kush. Our Killer Kush Auto (SWS56) is the result of the hybridization between a selected 3rd generation autoflowering genetic line leaning to the Indica side and an elite clone of OG Kush.

The result is a very potent plant with very fast flowering. This strain produces large and aromatic buds, all covered by a thick layer of trichomes. The aroma is sweet, citric and acid with exotic tones reminiscent of aromas from the Chem Dawg - Diesel family.

Indoor/Outdoor Harvest: 8 weeks from germination Height: 60-100 cm

3s+1s 19,90 € 5s+2s 33,00 €

#### Green Poison Auto®

3rd generation autoflowering strain. This hybrid is the result of crossing a selected strain of Big Devil #2 Auto® (SWS20) and our Green Poison® (SWS14) elite clone. The resulting hybrid was backcrossed twice with the original Green Poison® clone in order to establish the Green Poison® aroma and taste.

In this autoflowering variety the tastes and aromas are strongly set to a very pleasant and intense standard, with sweet fruity tones and a mild Skunk background. This variety features exceptional flower and resin production, providing a potent long-lasting effect.

Variety SWS30 **Indoor/Outdoor Harvest:** 8 weeks from germination Height: 60-100 cm

3s+1s 22,50 €

#### Big Devil #2 Auto®

3rd generation autoflowering strain. First genetic evolution of Big Devil Auto® (SWS15). We developed this tall-stemmed feminized autoflowering strain in response to the demand of our clients who asked for bigger autoflowering plants. This strain can reach to between 100 cm and 150 cm of height. More productive and more aromatic than its previous version, this plant produces compact resinous buds with numerous side branches. Sweet aromas with hints of incense and Skunk.

Variety SWS20 Indoor/Outdoor Harvest: 9 weeks from germination Height: 100-150 cm

3s+1s 25,00 € 5s+2s 42,00 €

#### Cream Mandarine XL Auto®

Tall-stemmed autoflowering strain. This high yielding 4th generation autoflowering strain is the resulting hybrid from the cross between selected specimens of our Cream Mandarine Auto® (SWS29) and a Súper Tai '98 elite clone.

The genetic coming from the Súper Tai '98 elite clone contributes with interesting Sativa characteristics to this hybrid, such as bigger size, but also subtle aromatic and spicy tones with hints of wood and nuts. The so much appreciated Cream Mandarine Auto® genetic contributes with traits from the Indica side, such as high flower and resin production, but also sweet and fresh aromas with tones of citric fruits of the mandarin orange type.

4th generation autoflowering strain. This hybrid is the result of a cross between our Ice Cool® (SWS06) elite clone and a 3rd generation autoflowering genetic line of Fast Bud #2 Auto® (SWS23). This is an autoflowering strain with intense and exotic aroma, typical of the Diesel family. Very sweet and spicy, with fresh tones reminiscent of blue cypress aromas.

This is a very powerful strain with a high bud production, covered with a remarkably aromatic resin layer that allows for a strong and exciting effect. Our autoflowering representative of the Diesel family.

Variety SWS46 Indoor/Outdoor Harvest: 8-9 weeks from germination Height: 50-110 cm

5s+2s 41,50 €

Variety SWS55 Indoor/Outdoor Harvest: 9 weeks from germination Height: 110-150 cm

3s+1s 23,90 € 5s+2s 39,50 €

#### + Speed Auto

3rd generation autoflowering strain. This hybrid is the result of crossing an autoflowering Critical Mass genetic line from the Sweet Seeds®' R&D Department, chosen for its fast flowering and pleasant intense aroma, with a selected strain of very fast flowering, our Speed Devil #2 Auto® (SWS25).

This autoflowering variety has been developed through the search for the genetic traits responsible for very fast flowering. The final result is a strain that is ready to harvest only 7 weeks from germination. It produces thick buds covered with aromatic resin. Sweet and fruity aromas with hints of yeast and cheese.

Variety SWS27 Indoor/Outdoor Harvest: 7 weeks from germination Height: 50-90 cm

3s+1s 20,90 € 5s+2s 34,50 €

#### S.A.D. Sweet Afgani Delicious Auto®

3rd generation autoflowering strain. Autoflowering version of our S.A.D. Sweet Afgani Delicious S1® (SWS02). This is the result of the cross between our best 2nd generation autoflowering strains and S.A.D. Sweet Afgani Delicious S1®.

This high-quality autoflowering strain features dense buds and outstanding resin production. Pungent sweet aroma with earthy tones. Fast flowering, strong effect and superb hybrid vigor.

Variety SWS24 Indoor/Outdoor Harvest: 8 weeks from germination Height: 40-90 cm

3s+1s 18,50 € 5s+2s 30,70 €

#### Mohan Ram Auto®

3rd generation autoflowering strain. This is the resulting hybrid of the cross between a selected strain of an autoflowering White Widow from the Sweet Seeds®' R&D Department and a selected strain of S.A.D. Sweet Afgani Delicious Auto® (SWS24). This easy-to-grow autoflowering strain shows great hybrid vigor and produces thick buds that are covered with aromatic resin with a potent, longlasting effect. It features an exquisite aroma which is very fruity, fresh, and floral with sweet musky undertones.

Variety SWS32 **Indoor/Outdoor Harvest:** 8 weeks from germination Height: 50-100 cm

3s+1s 19,90 € 5s+2s 32,80 €

4th generation autoflowering strain. In the development of this variety we used the famous "Cordobesa" Amnesia Haze clone. To introduce the autoflowering trait in this genetic we used selected genetic lines of our S.A.D. Sweet Afgani Delicious Auto® (SWS24), which contributes with a background of sweet and musky aromas to the cross.

This variety features a pleasant, deep and complex aroma of incense, with sweet and musky tones, complemented with lemony citrus hints, shades of wood and dried fruit. Tall-stemmed autoflowering strain, very resinous and productive.

Variety SWS57 Indoor/Outdoor Harvest: 8-9 weeks from germination Height: 60-120 cm

3s+1s 21,90 € 5s+2s 35,90 €

#### Fast Bud #2 Auto®

3rd generation autoflowering strain. Evolution of our Fast Bud Auto® (SWS16). A very productive auto with big buds and plenty of aromatic resin. Extremely vigorous plants producing lots of very strong side branches. The plants reach to between 40 cm and 90 cm of height.

Strong effect and sweet aromas with exotic tones inherited from the Diesel family. A very fast autoflowering strain.

Variety SWS23 Indoor/Outdoor Harvest: 7½ weeks from germination Height: 40-90 cm

Sweet Seeds® gives you the chance to acquire a small but excellent collection of 10, 100% feminised Autoflowering seeds at an extraordinary price.

In this Sweet Mix Auto it is possible to find a lot of different varieties, from Cream Mandarine Auto® (SWS29) to some of the latest purple flowered strains developed by the seedbank. These seeds are contained in a single tube.

10 Feminised Autoflowering seeds in a single tube

#### Red Poison Auto

Autoflowering strain. Hybridization between one of the most appreciated strains from our catalog, the amazing Green Poison® (SWS14), and an exotic purple flowered autoflowering strain, descending from Pakistani Kush ancestors.

Red Poison Auto (SWS39) grows with the appearance of an Indica-Sativa hybrid. It shows great hybrid vigor from the first stages of growth. The plants develop a strong main stem and long flexible side branches. This strain produces thick dense buds covered with aromatic resin.

Taste and aroma are both very pleasant and intense. Sweet and fruity with a soft Skunk background.

Variety SWS39 Indoor/Outdoor Harvest: 8 weeks from germination Height: 60-120 cm

Purple Flower: approx. 80% of the specimens

3s+1s 22,50 € 5s+2s 37,50 €

#### Bloody Skunk Auto

Autoflowering strain. This strain is the result of a cross between our Sweet Skunk Auto (SWS34) and a selected genetic line of Red Poison Auto (SWS39) that contributes with the purple flowered feature. The result is a marvelous and aromatic purple flowered strain featuring a deep Skunk aroma, extremely pleasant and sweet.

The structure of the plant is very similar to the classic Skunk strains, with the shape of a fir and lots of side branches. Large flowers covered with aromatic resin and a huge main cola on top. The flower clusters are very dense and in the course of flowering they get completely covered by resin.

Variety SWS44 Indoor/Outdoor Harvest: 8 weeks from germination Height: 60-110 cm Purple Flower: approx. 85% of the specimens

3s+1s 19,90 € 5s+2s 33,00 €

#### Black Cream Auto

Autoflowering strain. This is the result of the cross between our most awarded strain, the original Cream Caramel® (SWS04), and an exotic purple flowered autoflowering strain, descending from Pakistani Kush ancestors.

This plant looks like an Indica variety, with a short internodal distance, numerous small branches in the main stem, compact buds and a big main cola. This strain is a great resin producer. The aroma of Black Cream Auto (SWS37) is very sweet and fruity, with a background that features outstanding earthy tones inherited from our Cream Caramel®.

Variety SWS37 Indoor/Outdoor Harvest: 8 weeks from germination Height: 60-110 cm Purple Flower: approx. 80% of the specimens

3s+1s 21,90 € 5s+2s 36,50 €

#### Dark Devil Auto

Autoflowering strain. This is the result of the hybridization between one of our most appreciated autoflowering genetics, the incredible Big Devil XL Auto® (SWS28), and an exotic autoflowering strain with purple flowers. The purple characteristic of this strain is inherited from its ancestors from the Chitral region in the Pakistani Hindu Kush, very close to Afghanistan.

The purple genetics contribute for a faster flowering period, bringing new sweet aromas and purple colors to our Big Devil XL Auto®. Dark Devil Auto (SWS38) shows a strong hybrid vigor since germination. Plants grow with the appearance of Indica-Sativa hybrids, developing a strong main stem and numerous side branches, finishing with a big main cola surrounded by multiple smaller buds on the side branches. Resin production is abundant in the flowers and in their surrounding leaves. Sweet and fruity aroma with hints of incense and delightful

2014

#### Devil Cream Auto

Autoflowering strain. This polihybrid is the result from a cross between selected genetic lines of two of our purple flowered varieties: Dark Devil Auto (SWS38) and Black Cream Auto (SWS37). This strain shows a great hybrid vigor since germination as it is composed of a wide genetic mix.

This variety develops the typical structure of an Indica-Sativa hybrid, with a strong main stem, tough side branches and big leaves that end up forming a thick and dense main cola, surrounded by multiple buds on the side branches also with a good calibre and density. Devil Cream Auto (SWS45) produces copious amounts of very aromatic resin. The aroma is sweet and fruity with hints of incense and lemony citrus tones. The plants grow quite tall for an autoflowering strain, a characteristic inherited from the Dark Devil Auto genes that intervene in the cross. Some specimens can reach a height of more than one metre high, all this in just two months after the germination of the seeds. The resin of this plant has a potent and exciting effect.

Variety SWS45 Indoor/Outdoor Harvest: 8 weeks from germination Height: 70-120 cm Purple Flower: approx. 85% of the specimens

#### San Fernando Lemon Kush®

Excellent hybridization between two of our best elite clones coming from USA genetics. In the cross takes part a selected clone of San Fernando Valley OG Kush, one of the oldest and most original OG Kush genetics, characterized by a pleasant and complex OG Kush scent, with strong presence of the lemony aroma coming from the Lemon Thai that takes part in the original OG Kush cross. The other elite clone that intervenes in the cross is a Kosher Kush, a modern genetic from the OG Kush family very appreciated in the zone of Los Angeles and nearby areas (California).

The aroma of this strain is very pleasant and intense, with original lemony tones of OG Kush and hints of solvent, notes of spices, wood and blue cypress.

The plants look like Indica-Sativa hybrids leaning to the Sativa side. This type of American varieties with strong presence of the limonene terpene are highly appreciated in the USA for cannabic extractions.

Variety SWS62 Indica/Sativa: 35%/65% **Indoor Blooming:** 9 weeks

**Outdoor Harvest:** late September to early October

IEW · NEW · NEW · NEW

This variety was developed within a programme of the Sweet Seeds®' R+D Department that was focused on the search for exquisite and marvellous earthy aromas. This strain is the resulting hybrid from the cross between an elite clone of So G Kush (OG Kush x LA Confidential x Trainwreck) and our elite clone of Blue Monster (Blueberry'99 x Black Domina'98). The Blue Monster clone that takes part in this cross brings the earthy soul aroma to our appreciated and classic Cream Caramel® (SWS04). The aroma of this variety is exquisite, very sweet and with a pleasant strong earthy presence.

This scent comes mixed with a background of aromas typical of the OG Kush family, featuring exotic and pepper spicy tones with a fresh touch of cypress. The plants grow with mostly Indica structure, producing a big main bud, very resinous and compact, complemented with multiple side branches completely covered by smaller flowers of the highest quality. This strain is a great producer of resin crystals.

Variety SWS63 Indica/Sativa: 60%/40% **Indoor Blooming:** 8-9 weeks **Outdoor Harvest:** late September

#### Psicodelicia®

This strain is a cross between a clone from the United States and a plant from Nepal whose spiced aromas bring to mind places where coffee is toasted.

A mostly Sativa plant with very short flowering period, producing generous buds all full of resin.

The effect is typical of a mostly Sativa hybrid: energetic, clean and exciting. An ideal strain for artistic and creative activities.

Variety SWS07 Indica/Sativa: 30%/70% **Indoor Blooming:** 8-9 weeks

Outdoor Harvest: late September to early October

3s+1s 19,50 € 5s+2s 32,50 €

#### Big Foot

This very potent plant featuring great abundance of pistils and massive resin production is one of the most outstanding varieties of the Sweet Seeds®' catalog. It has an extraordinary aroma, great hybrid vigor and very fast flowering time. Big Foot is an Indica-Sativa hybrid with strong main stem, large number of side branches and short internodal distance. This high yielding strain produces a big main bud and lots of secondary buds on the peripheral branches. The buds are compact and produce copious amounts of extremely aromatic resin. The aroma and taste of this variety is very intense, dense, sweet and fruity with spicy undertones. The effect is quite potent and can range from euphoria to comfortable relaxation.

Variety SWS36 Indica/Sativa: 50%/50% **Indoor Blooming:** 9 weeks Outdoor Harvest: late September

3s+1s 24,90 € 5s+2s 40,90 €

result of a three way cross between our best Indicas: Blue Black x Maple Leaf Indica x White Rhino. This classic strain features a sweet intense taste that is reminiscent of caramel, combined with a hint of earthy flavors inherited from the Blue genetic that intervenes in the cross. This variety is ideal for indoor growing.

This strain is the favorite of medicinal cannabis users. Relaxing and antidepressant.

Variety SWS04 Indica/Sativa: 90%/10% **Indoor Blooming:** 8-9 weeks **Outdoor Harvest:** late September to early October

#### S.A.D. S1® Sweet Afgani Delicious

Self-pollination of one of our most powerful and aromatic mothers, a Black Domina selected in 1998.

The self-pollination of this super mother produces dense buds covered by abundant resin. This strain features sweet intense aroma and a musky flavor inherited from its afghan ancestors.

This S1 seed allows for a very homogeneous offspring regarding the described characteristics. Easy to grow and very resistant to pests and fungus.

Crossbreed of our Black Domina with an exceptional Jack Herer that features a pleasant and intense bouquet similar to the Haze's cathedral incense aromatic trait. The result is Black Jack® (SWS01), one of our most powerful and productive strains.

This classic strain features great hybrid vigor and it is totally adapted to indoor grows. When planted outdoors, directly in the ground and with enough sunlight, it becomes a resinous hairy monster of about three meters of height.

Variety SWS02 Indica/Sativa: 90%/10% **Indoor Blooming:** 8-9 weeks **Outdoor Harvest:** late September

# Crystal Candy®

This strain was developed within a special programme of the Sweet Seeds®' R&D Department focused on the search for curious, exquisite and subtle sweet aromas that evoke aromatic sensations of candy shop. The aroma of this variety is sweet and fruity, with tones of chewing gum and fruit jellies, mixed with hints of acid strawberry and mature melon.

This variety is a big producer of aromatic resin crystals that completely cover the flowers and their surrounding leaves with a very high density of long, large-headed trichomes. The plants look like Indica-Sativa polyhybrids, very vigorous and productive, with big buds and long side branches.

## 9ack 47®

This super hybrid is the result of the cross between two of the most potent genetics of all time, Jack Herer x AK 47. Jack 47® (SWS08) is a very productive plant with strong effect that grows with an extraordinary vigor. This allows for big buds with copious amounts of resin. The tastes and aromas of this variety are sweet and fresh, complemented with a lemony hint and tones of incense.

As a result of its genetic freshness and hybrid vigor, this plant adapts very well to every kind of growing techniques. Besides that, it allows for the production of strong and healthy clones that show roots in only 7 days.

#### Sweet Cheese®

A fusion between two high grade strains: Cheese x Black Jack® (SWS01). This genetic highlights the virtues of its ancestors bringing a new twist of aromas to the flavor of the Black Jack®. It produces long central buds surrounded by plenty of peripheral buds also long and with a good caliber.

The high yielding, together with a new revolutionary flavor featuring hints of matured and spicy cheese makes Sweet Cheese® (SWS19) a recommended option for those who seek new flavors and aromas.

Regarding the effects, it is important to remember that we are dealing with the mix of two of the best hitters in cannabis engineering. Strong and long-lasting effect, inducing euphoria and a nice feeling of relaxation.

Variety SWS19 Indica/Sativa: 30%/70% **Indoor Blooming:** 9 weeks Outdoor Harvest: mid September

3s+1s 14,50 € 5s+2s 24,00 €

Exceptional hybridization of our Cream Caramel® (SWS04) with our elite clone of AK 47. The result of this cross is a very powerful plant, productive and aromatic. Quite vigorous plant, it produces strong thick stems and branches. It develops large, dense buds, loaded with plenty of resin. During flowering some plants can acquire blue, purple and reddish colors. The yield at the end of the flowering period is very high. The flavor and aroma of this strain is extra sweet and preserves the so much appreciated earthy and humus background, original of our Cream Caramel®. The effect of this plant is very potent and at the same time very well-balanced, between relaxation and excitement, typical of Indica-Sativa hybrids.

Variety SWS26 Indica/Sativa: 50%/50% **Indoor Blooming:** 8 weeks Outdoor Harvest: mid September

3s+1s 28,50 € 5s+2s 47,50 €

#### Mohan Ram®

Hybridization between a White Widow elite clone and our sweet S.A.D. Sweet Afgani Delicious S1® (SWS02).

The White Widow side provides a fresh, floral and fruity touch to the sweet musk of our S.A.D. Sweet Afgani Delicious S1®.

The result is an ideal mostly Indica plant with a spectacular production of resin. Mohan Ram® (SWS09) blooms very fast and features a strong long-lasting effect. It is also easy to grow and features an exquisite aroma.

3s+1s 20,00 € 5s+2s 33,00 €

# Green Poison®

This very high yielder is a hybrid with Indica predominance but with long and flexible side branches over which a large main cola dominates.

Featuring fast flowering and vigorous growth, this superproducer starts to develop a lot of buds just a few days after flowering begins.

The aroma of this variety is very intense, sweet and fruity. Due to its fast flowering this plant is suitable for humid areas where mold and fungus usually attack.

Indica/Sativa: 70%/30% **Indoor Blooming:** 

7 weeks

# Fast Version® Ultra-fast flowering feminised seeds

F1 Fast Version® strains are non-autoflowering versions with an ultra-fast flowering of some of the most appreciated strains from the Sweet Seeds®' catalog. These new genetics are F1 hybrids between elite clones of our non-autoflowering varieties and our best selection of third generation autoflowering strains. The autoflowering genetics contribute for a significant shortening in the flowering and maturation time frame of the F1 hybrid. This means that when grown indoors the plants are ready to be harvested only 6 or 7 weeks after changing the light cycle to 12 hours of light and 12 hours of darkness. In outdoor grows the plants shorten the harvest time in 1 or 2 weeks comparing with their original versions. Due to their fast flowering, these varieties are highly appropriate for humid climates where plants usually get more vulnerable to mold, as they manage to anticipate harvest to the most virulent botrytis known for decimating the buds of longer flowering Indicas.

#### Sweet Tai®

Fantastic crossbreed between our elite clones of Súper Tai and Early Skunk. The resulting hybrid features a very tasty, deeply spiced and exotic flavor that is typical of Asian varieties.

The Early Skunk genetic side shortens the flowering period, but also allows for denser and more resinous buds, with a more compact structure that turns it into a strain adapted for indoor growing. Produces a very active cerebral high.

Outdoor Harvest: late September to

early October

3s+1s 17,50€

5s+2s 29,00€

#### Green Poison <del>T</del>1 <del>T</del>ast Version®

Feminized and photoperiod-dependent version of our Green Poison® (SWS14) now featuring ultra-fast flowering. This is an F1 hybrid resulting from the cross between the elite clone of our appreciated Green Poison® and a selected 3rd generation autoflowering genetic line of Green Poison Auto® (SWS30). This strain is ready to harvest with thick buds all covered with abundant aromatic resin only 6 weeks after the flowering photoperiod begins. The plants have the appearance of Indica-Sativa hybrids, with an exceptionally vigorous growth, very fast flowering and large production of flowers. Exquisite taste and aroma with a sweet intense hint of fruit. This strain is remarkably resistant to mold in outdoor grows, considering that due to its fast flowering the plant succeeds in anticipating its harvest to the period in which botrytis usually attacks.

Variety SWS41 Indica /Sativa: 70%/30% **Indoor Blooming:** 6 weeks Outdoor Harvest: late August to early September

22,50 € 5s+2s

#### Sweet Skunk 71 Fast Version®

Feminized and photoperiod-dependent version with an ultra-fast flowering of one of the most famous cannabis families of all time, considered nowadays as a classic of cannabis breeding. This strain is the result of the hybridization between a selected genetic line of our Sweet Skunk Auto (SWS34) and our Early Skunk elite clone. The F1 hybrid resulting from the cross between the autoflowering and the photoperioddependent strains originates a photoperiod-dependent Skunk genetic that features very fast flowering. The aroma of this strain is very sweet and spicy, just like the classic aroma that we usually find within the Skunk family. This strain produces thick buds, loaded with abundant and aromatic resin.

Variety SWS54

Indica/Sativa: 65%/35% **Indoor Blooming:** 6-7 weeks Outdoor Harvest: late August to

early September

### Sweet Mix Feminised

A little but excellent collection of 10 100% feminized and photoperiod-dependent seeds at an excellent price!

Sweet Seeds® gives you the chance to acquire a small but excellent collection of 10, 100% feminised photoperioddependent seeds at an extraordinary price.

This pack contains a mix of 10 randomly chosen seeds among all photoperiod-dependent strains (not autoflowering) from Sweet Seeds®, like Cream Caramel® (SWS04), Green Poison® (SWS14) or Jack 47® (SWS08). These seeds are contained in a single tube.

10 Feminised and photoperior-dependent seeds in a single tube

#### Cream Caramel 71 Fast Version®

Feminized and photoperiod-dependent version of the most awarded strain from the Sweet Seeds®' catalog, our Cream Caramel® (SWS04), now featuring ultra-fast flowering. This F1 hybrid is the result of the cross between an elite clone of our Cream Caramel® and a selected strain of our 3rd generation autoflowering Cream Caramel Auto® (SWS22). This version of Cream Caramel® features strong hybrid vigor that turns up into plants with the usual mainly Indica structure. Shows great homogeneity in all the offspring. The aroma is very sweet resembling caramel, with earthy tones inherited from the Blue genetics used in the cross of the original Cream Caramel®.

This kind of strains are usually the favourites of medicinal cannabis users. Chemotypes with high THC levels and enough CBD to provide a relaxing and antidepressant effect.

Variety SWS40 Indica/Sativa: 90%/10% **Indoor Blooming:** 7 weeks

3s+1s 21,90 € 5s+2s 36,50 €

Outdoor Harvest: mid September

#### Sweet Cheese <del>7</del>1 <del>F</del>ast Version®

Feminized and photoperiod-dependent version of our Sweet Cheese® (SWS19) now featuring ultra-fast flowering. This strain is the F1 hybrid resulting from the cross between a selected Sweet Cheese® elite clone and a selected 3rd generation autoflowering genetic line of Sweet Cheese Auto® (SWS33). This version of Sweet Cheese® preserves the traditional and desired matured spicy cheese aroma from the Cheese genetics. It produces long thick buds, which are quite dense and totally covered with very aromatic and crystalline trichomes. The F1 cross brings more homogeneity and hybrid vigor to the offspring. The cross with the autoflowering genetic shortens the flowering and maturity time of this strain in several weeks.

Variety SWS42 Indica/Sativa: 40%/60% **Indoor Blooming:** 8 weeks Outdoor Harvest: late August to

early September

100€

26,50€

Attending to the request of our friends and clients we introduce the feminized and photoperiod-dependent version of our much appreciated Cream Mandarine Auto® (SWS29). To develop this variety we selected our best Cream Mandarine Auto® genetic lines. In order to eradicate the autoflowering characteristic of the original version and, at the same time, to strengthen the aroma traits, we hybridized these selected genetic lines with an elite clone of Diesel ancestors featuring tones of aromatic mandarin orange. The plants show great vigor and the structure of an Indica-Sativa hybrid. This strain produces big compact buds fully loaded with aromatic resin.

Variety SWS50

Indica/Sativa: 60%/40% **Indoor Blooming:** 7 weeks Outdoor Harvest: early September

#### 9ack 47 <del>T</del>1 <del>T</del>ast Version®

Feminized and photoperiod-dependent version with an ultra-fast flowering of one of the most potent strains of our catalogue. This strain is the result of the cross between a selected genetic line of Jack 47 Auto® (SWS31) and an elite clone of our Jack 47® (SWS08). The cross between the autoflowering and the photoperiod-dependent strains originates a photoperiod-dependent genetic that shortens the flowering time by one week when compared with the original version of Jack 47®. This is a very powerful strain that produces exceptionally vigorous plants with thick buds that get fully covered by abundant resin during flowering. The taste and aroma of this strain is fresh and sweet, with tones of incense and flowers combined with lemony citrus hints.

Variety SWS51 Indica/Sativa: 25%/75% Indoor Blooming: 7-8 weeks Outdoor Harvest: mid September

#### Killer Kush 71 Fast Version®

Feminized and photoperiod-dependent version of one of the most famous strains from the West Coast of USA, developed around the year of 1994 in Sunset Beach, South California, the Ocean Grow Kush, better known as OG Kush. With an ultra-fast flowering, our Killer Kush F1 Fast Version® (SWS52) is the resulting hybrid from the cross between a selected 3rd generation autoflowering genetic line leaning to the Indica side and an elite clone of OG Kush. The result is an extremely potent plant with a very fast flowering. This strain produces large and aromatic buds, all covered by a thick layer of resin. The aroma is sweet, citric and acid with exotic tones reminiscent of aromas from the Chem Dawg - Diesel

Variety SWS52 Indica/Sativa: 80%/20% **Indoor Blooming:** 7 weeks

19,90 € 5s+2s 33,00 €

Outdoor Harvest: early September

#### S.A.D. Sweet Afgani Delicious 71 Fast Version®

Feminized and photoperiod-dependent version with an ultra-fast flowering of one of the sweetest and most aromatic strains of our catalog. This genetic is the resulting hybrid from the cross between a selected genetic line of S.A.D. Sweet Afgani Delicious Auto® (SWS24) and a Black Domina elite clone selected in 1998. The cross between the autoflowering genetic and the photoperiod-dependent clone produces photoperiod-dependent F1 hybrids and shortens flowering time by one week.

This is a strain with very dense buds and a big resin producer. The aroma of this strain is exquisite, very sweet and musky, typical of some Old School Afghan

Variety SWS53 Indica/Sativa: 90%/10% **Indoor Blooming:** 6-7 weeks Outdoor Harvest: early September

18,50€

5s+2s 30,50€

## Big Devil <del>T</del>1 <del>T</del>ast Version®

Attending to the request of our friends and clients we introduce the feminized and photoperiod-dependent version of our much appreciated Big Devil Auto® (SWS15). To develop this variety we used our best Big Devil Auto® selected genetic lines. We eliminated the autoflowering characteristic of the original version of Big Devil Auto® by hybridizing these selected genetic lines with an elite clone that features some characteristics that are very similar to the original Big Devil Auto®. The result is a very vigorous plant with an imposing structure and a very high yielder of exceptional dense resin covered buds. This strain develops a strong main stem and long side branches. It truly preserves the taste and aroma of our original Big Devil Auto® which is very sweet, combined with hints of incense and Skunk.

Variety SWS48 Indica/Sativa: 35%/65% **Indoor Blooming:** 8-9 weeks Outdoor Harvest: mid to late September

#### Black Jack 71 Fast Version®

Feminized and photoperiod-dependent version with an ultra-fast flowering of one of the first and most appreciated strains of our catalog, our Black Jack® (SWS01). This F1 hybrid is the result from the cross between a selected genetic line of S.A.D. Sweet Afgani Delicious Auto® (SWS24) and the Jack Herer elite clone used in the original Black Jack®. Just like the original version, this strain produces very potent and productive plants, with strong side branches that are very long and fully loaded with aromatic flowers. The aroma is very sweet, featuring hints of incense complemented by lemony citrus tones. This version shortens the flowering time by one week compared to the original version.

Variety SWS49 Indica/Sativa: 50%/50% Indoor Blooming: 7-8 weeks Outdoor Harvest: mid September

3s+1s 19,50 € 5s+2s 32,50 €

Sale for people over 18 years: The sale of seeds and other products is exclusive for customers over 18 years old. In the Spanish State, Cannabis seeds are not regulated: Sale and possession of Cannabis seeds is not constitutive of crime. The Cannabis seed is not included in the legal concept of Cannabis established in the United Nations Single Convention of Narcotic Drugs of 1961 and it is also not included in its Annexes. The article 1.b of the Convention defines "cannabis" as: "the flowering or fruiting tops of the cannabis plant (excluding the seeds and leaves when not accompanied by the tops) from which the resin has not been extracted". In its art. 28 it also states that "This Convention shall not apply to the cultivation of the cannabis plant exclusively for industrial purposes (fibre and seed) or horticultural purposes". Cannabis seeds sold by Sweet Seeds within the Spanish territory are collection items and genetic preservation items: It is expressly prohibited to use seeds and other marketed products for purposes that are against the current legislation. Illegal cultivation: the Spanish legislation establishes as legal violations the cultivation, processing, trafficking or other activities which promote, favor or facilitate the illegal consumption of toxic drugs, narcotic or psychotropic substances, and as an administrative sanction the execution of acts of illicit planting and cultivation of toxic drugs, narcotic drugs or psychotropic substances in public places where they are not constitutive of legal violations. Check the legislation of your country of residence: National laws regarding the sale and possession of Cannabis seeds, their cultivation and the consumption of Cannabis, largely differ from one country to another. In some countries the simple possession or sale of cannabis seeds is illegal. Some countries punish acts of cultivation, while other countries allow them for industrial, scientific, educational, medicinal or personal use purposes. If you are outside the Spanish State refer to current legislation of the State or Country
